

ELVIS TANG

Cybersecurity Analyst | Security Monitoring | SIEM

714-391-2768 | elvistang199@gmail.com

linkedin.com/in/elvis-np-tang | github.com/elvistang199 | elvistangprojects.com

Security+ certified Computer Engineering graduate with hands-on experience in Microsoft Sentinel, network traffic analysis, log monitoring, alerting, and incident investigation. Seeking an entry-level SOC or cybersecurity analyst role focused on security monitoring, triage, and response.

EXPERIENCE

Embedded Systems Project Lead - Lockheed Martin-Sponsored Capstone

Aug 2022 - May 2023

California State Polytechnic University, Pomona

Pomona, CA

- Developed and debugged embedded C/C++ software for an autonomous ground vehicle integrating LiDAR, cameras, IMU, ultrasonic sensors, and wheel encoders.
- Implemented and tested UART, SPI, and I2C interfaces across Raspberry Pi, Arduino, sensors, and motor-control components.
- Collaborated with Lockheed Martin engineers on algorithm design, integration testing, obstacle-avoidance trials, and technical documentation.

Instructor

Nov 2023 - Sep 2024

Coding Minds Academy

Irvine, CA

- Taught Python, JavaScript, Git, secure-coding practices, and introductory hardware concepts to classes of 10+ students.
- Guided software and hardware projects from design through debugging and demonstration, adapting instruction to individual skill levels.
- Developed age-appropriate curricula connecting programming fundamentals with game development and real-world engineering tools.

Stand Lead

Aug 2024 - Present

Aramark

Anaheim, CA

- Patch and troubleshoot point-of-sale systems to keep registers operational during high-volume events.
- Coordinate daily concession operations serving 1,000+ guests per shift and resolve 20+ customer or operational issues.
- Manage inventory for 50+ items while maintaining food-safety, cash-handling, and workplace compliance procedures.

SELECTED PROJECTS

Network Traffic Investigation - SOC Homelab | Wireshark, tcpdump, Nmap, PowerShell

- Built a Mac-hosted Ubuntu/Windows lab and analyzed ICMP, DNS, TCP, HTTP, and TLS traffic, identifying an HTTP-to-HTTPS redirect and validating TLS 1.3 session metadata.
- Correlated Windows network connections with owning processes and Security Event ID 4672, then validated authorized Nmap activity against TCP SYN probes in Wireshark across 1,000 scanned ports.

Microsoft Sentinel Honeypot and Threat-Mapping Lab | Microsoft Sentinel, Azure

- Deployed a cloud-hosted honeypot and connected its security telemetry to Microsoft Sentinel for centralized monitoring.
- Reviewed 500+ events, mapped 200+ observed attack patterns, and used Microsoft threat-intelligence data to visualize malicious source activity.

Python Log Monitoring and Alerting Engine | Python, SQLite

- Built a multithreaded Python SIEM prototype that generates sample login and file-access events while monitoring a live log file.
- Parsed events into SQLite records and implemented modular detection logic that alerts on repeated failed-login activity.

Hybrid File Encryption Utility | C++, RSA, AES

- Developed a C++/Crypto++ utility that generates 2,048-bit RSA keys, protects a randomly generated AES key with RSA-OAEP, and encrypts file content with AES-CBC.
- Defined a validated encrypted-file format and implemented file selection, hexadecimal ciphertext inspection, error handling, and a single-write output buffer.

EDUCATION & CERTIFICATIONS

B.S., Computer Engineering - California State Polytechnic University, Pomona

Certifications: CompTIA Security+ (SY0-701) | Google Cybersecurity Professional Certificate

TECHNICAL SKILLS

Security: SIEM, network traffic analysis, packet analysis, security monitoring, log analysis, alert triage, incident response fundamentals, honeypots, threat intelligence

Tools & Languages: Microsoft Sentinel, Azure, Wireshark, tcpdump, Nmap, PowerShell, Python, SQLite, Bash, C/C++, Git, GitHub

Networking & Cryptography: TCP/IP, DNS, HTTP/HTTPS, TLS, ICMP, AES, RSA, authenticated encryption, hashing
