

ELVIS TANG

Cybersecurity Analyst | Security Monitoring | SIEM

714-391-2768 | elvistang199@gmail.com
linkedin.com/in/elvis-np-tang | github.com/elvistang199 | elvistangprojects.com

Security+ certified Computer Engineering graduate with hands-on experience building Microsoft Sentinel, honeypot, log-analysis, alerting, and encryption projects. Seeking an entry-level SOC or cybersecurity analyst role focused on security monitoring and incident investigation.

EXPERIENCE

Stand Lead

Aramark

Aug 2024 - Present
Anaheim, CA

- Patch and troubleshoot point-of-sale systems to keep registers operational during high-volume events.
- Coordinate daily concession operations serving 1,000+ guests per shift and resolve 20+ customer or operational issues.
- Manage inventory for 50+ items while maintaining food-safety, cash-handling, and workplace compliance procedures.

Instructor

Coding Minds Academy

Nov 2023 - Sep 2024
Irvine, CA

- Taught Python, JavaScript, Git, secure-coding practices, and introductory hardware concepts to classes of 10+ students.
- Guided software and hardware projects from design through debugging and demonstration, adapting instruction to individual skill levels.
- Developed age-appropriate curricula that connected programming fundamentals with game development and real-world engineering tools.

Embedded Systems Project Lead - Lockheed Martin-Sponsored Capstone

California State Polytechnic University, Pomona

Aug 2022 - May 2023
Pomona, CA

- Developed and debugged embedded C/C++ software for an autonomous ground vehicle integrating LiDAR, cameras, IMU, ultrasonic sensors, and wheel encoders.
- Implemented and tested UART, SPI, and I2C interfaces across Raspberry Pi, Arduino, sensors, and motor-control components.
- Collaborated with Lockheed Martin engineers on algorithm design, integration testing, obstacle-avoidance trials, and technical documentation.

SELECTED PROJECTS

Microsoft Sentinel Honeypot and Threat-Mapping Lab | Microsoft Sentinel, Azure

- Deployed a cloud-hosted honeypot and connected its security telemetry to Microsoft Sentinel for centralized monitoring.
- Collected and reviewed more than 500 events to practice security-event investigation and blue-team analysis.
- Mapped more than 200 observed attack patterns and used Microsoft threat-intelligence data to visualize malicious source activity.

Python Log Monitoring and Alerting Engine | Python

- Built a multithreaded Python SIEM prototype that generates sample login and file-access events while monitoring a live log file.
- Parsed timestamped events into structured records, stored them in SQLite, and separated generation, collection, parsing, storage, and alerting modules.
- Implemented detection logic that identifies repeated failed-login events and produces a console alert for analyst review.

Hybrid File Encryption Utility | C++, RSA, AES

- Developed a C++/Crypto++ utility that generates 2,048-bit RSA keys, protects a randomly generated AES key with RSA-OAEP, and encrypts file content with AES-CBC.
- Defined a versioned encrypted-file format containing a magic header, wrapped AES key, initialization vector, and ciphertext with validation during decryption.
- Implemented dynamic file selection, plaintext creation, hexadecimal ciphertext inspection, error handling, and a single-write output buffer.

EDUCATION & CERTIFICATIONS

B.S., Computer Engineering - California State Polytechnic University, Pomona | Spring 2023

Certifications: CompTIA Security+ (SY0-701) | Google Cybersecurity Professional Certificate

TECHNICAL SKILLS

Security: SIEM, security monitoring, log analysis, alerting, incident response fundamentals, honeypots, threat intelligence

Tools & Languages: Microsoft Sentinel, Azure, Python, C/C++, PowerShell, Bash, Git, GitHub

Cryptography: AES, RSA, authenticated encryption, hashing
